## Scope of the seminar

Man has travelled a long way in his endeavors to advance each and every field of knowledge and life. Almost all the achievements of man can be attributed to his curiosity, which has led him in understanding and discovering many secrets of the globe. As a consequence, he has reached today's level of development in all spheres of life. However, despite all these achievements, he has been facing so many problems and challenges and the major challenges are the ones he himself has created. We at St. Albert's College (Autonomous) strongly believe in sharing cutting edge research outcomes for opening the right path in scholastic minds particularly the younger ones. Let us join our hands in taking these initiatives further for the betterment of the society. Organized under the focal theme 'Knowledge for Everyone in the Society' the Albertian Knowledge Summit (AKS)-An International Conference on Multidisciplinary Research has been conducted every year since 2016-17 academic years. It is a platform where many national and international scientists/industrialists visit the college and deliver talks in their areas of expertise; interact with students, research scholars and teachers. Apart from these, teachers, students and research scholars were got the opportunity to present their research work as oral paper or poster presentations. AKS has now become an icon of St. Albert's College and we believe that it has uplifted the research aptitude, motivation and knowledge of students, research scholars, teachers from in and outside the college.
